

Company Profile

A Leader in Intelligent Document Recognition

Top Image Systems, Ltd. (TiS) provides automated data capture solutions that accelerate enterprise business processes by integrating data of various types and from multiple sources. TiS' innovative solutions incorporate enterprise business rules to capture, validate, process, and efficiently deliver critical content to document and content management applications, ERP, or CRM via a single platform.

The company's signature software, *eFLOW Unified Content Platform™*, processes and integrates large quantities of complex information in an efficient and effortless manner, thus simplifying communication for any enterprise.

The Preferred Solution

Top Image Systems is recognized for the volumes of structured, semi-structured, and unstructured documents it processes and the complexity of document formats it can handle. *eFLOW* is the preferred solution for customers who need to collect large quantities of information from various sources such as paper, fax, electronic, email, and mobile formats.

eFLOW has a definite advantage in mixed environments, where documents in different formats need simultaneous processing, sorting, and storing in a database for retrieval at a later time. Top Image Systems' technology can manage these tasks without the need to pre-design a working template.

Top Image Systems has strongly invested in R&D in the past few years, and has continuously developed its technologies. TiS is fine-tuning more sophisticated tools to collect data from unstructured documents such as letters, reports, or various email formats.

Solutions Marketed Worldwide

Founded in 1991, Top Image Systems (NASDAQ: TISA) is headquartered in Tel Aviv, Israel, with branch offices in the United States, Latin America, Germany, and United Kingdom.

Top Image Systems markets its solutions in more than 30 countries through a network of distributors, system integrators, value-added resellers, and strategic partners. Top Image Systems' strategic partners, recognized as industry leaders in their markets, include SAP, Oracle, Documentum, IBM, Toyo Ink/EDMS, Agfa, Kodak, Xerox, Unisys, and Fujitsu.

Top Image Systems has repeatedly won professional benchmarks for large and diverse projects worldwide. TiS has numerous reference sites with operational systems, which have enabled dramatic increases in throughput as well as sizable cost savings.

I mproving Enterprise - Customer Relationships

Every enterprise deals with a multitude of information, in countless forms and documents, on a daily basis. This content includes an assortment of document formats entering the organization from a variety of sources. These documents need to be processed and incorporated into numerous applications, and ultimately stored or sent to a specified department or company.

Top Image Systems' *eFLOW Unified Content Platform™* facilitates an efficient flow of information among departments and companies. When inbound and outbound information are seamlessly delivered, errors and backlogs are sharply decreased, which rapidly translate into savings in corporate operations. When content is effectively communicated to addressees, enterprises can connect with their customers in a flexible and timely manner.

A Focus on Vertical Markets

Top Image Systems recognizes that the form processing and data capture marketplace is segmented into vertical applications. Accordingly, Top Image Systems has steered its solutions toward these markets:

- Logistics & Transportation
- Accounts Payable
- BPO & Service Bureaus
- Finance & Banking
- Government
- Insurance
- Retail
- Manufacturing & Distribution
- Postal Services
- Healthcare
- Population Census

P roviding Accredited Benefits

Top Image System's *eFLOW* allows enterprises to reduce costs, improve communication with customers, partners, and employees, and consequently respond faster to new business opportunities.

- TiS provides enterprise-wide solutions for every data capture and content delivery need, all on a SINGLE platform, using one set of business rules
- *eFLOW* allows sophisticated handling of any structured, semi-structured, and unstructured documents, including those with multiple pages and complex tables
- *eFLOW* provides integrated data capture and data processing from multiple sources, such as paper, fax, image files, email, eforms, microfiche, and PDAs
- *eFLOW* dramatically reduces resources and costs associated with manual data entry, re-keying, and delivery of content to enterprise applications
- TiS technology achieves superior recognition results and outstanding data accuracy
- Processing efficiency and improved throughput lead to significant cost savings and rapid ROI
- *eFLOW* supports distributed environments with remote scanning and processing requirements
- Open and scalable architecture enables unlimited system expansion
- *eFLOW* promotes improved service and responsiveness to customers and partners
